THYMUS & live probiotics

“Dr. Kachugin - natural health improvement”

- ⊙ **Stimulates immune system**
- ⊙ **Improves metabolic rate**
- ⊙ **Optimizes balance of intestinal flora**
- ⊙ **Slows down aging process**
- ⊙ **Possesses rejuvenative properties**

Thymus – Bifidobacteria Complex contains a high concentration of lyophilized thymus tissue concentrate in combination with life beneficial Bifidobacteria. These ingredients boost the body's natural immune function. It helps the body to maintain good health, to prevent disease and also slows aging.

Thymus is a key organ of the immune system. The thymus gland acts to regulate the immune system through the development of immune cells responsible for cell mediated immunity. In addition to immune function, the thymus also produces hormones. The thymus and its hormones also influence other organs and organ systems including the kidneys, spleen, reproductive system, and central nervous system. The thymus gland is very active in childhood. By the time a person is about fifty - sixty, their thymus gland will barely be discernible from the surrounding fatty tissues. Thymic involution is one of the most dramatic and ubiquitous changes in the aging immune system. Lower thymic hormone levels in the blood are associated with depressed immunity, and are typical of the elderly, individuals with chronic infections, autoimmune disorders, cancer and AIDS patients. Many diseases can, directly or indirectly, be traced back to a disorder of the immune system. The use of thymus extracts leads to a fundamental restoration of the immune system. Thymus extracts are commonly used to treat primary immune deficient states, bone marrow failure, autoimmune disorders, chronic skin diseases, recurrent viral and bacterial infections, hepatitis, allergies, chemotherapy side effects, and cancer. Patients with malignant tumors have been found to have an increased immune response and a level of improvement of their quality of life after treatment with thymus hormones. The regular application of thymus products reduces the susceptibility to infection. Thymus extract guards against infection and cancer by stimulating the white blood cells. A person using Thymus Glandular Supplement has a better chance of fighting off diseases and also slows aging.

THYMUS COMPLEX IS COMPOSED OF NEW ZEALAND FREEZE DRIED GLANDULARS.

Probiotics (Bifidobacteria Complex)

The normal human digestive tract contains about 500 types of bacteria. Probiotics are microorganisms that provide health benefits when consumed. Probiotics are generally considered safe – they're already present in a normal digestive system. Probiotics play very important roles in regulating proper intestinal function and digestion – by balancing intestinal micro flora. Probiotics may also be helpful as they provide beneficial bacteria to modulate immune inflammatory responses. Probiotics improve intestinal function. Clinical studies have established that probiotic therapy can help treat several gastrointestinal ills, delay the development of allergies in children, and treat and prevent vaginal and urinary infections in women. Bifidobacteria-probiotics are a natural component of the bacterial flora of the human body. Aging is associated with reduced numbers of beneficial colonic Bifidobacteria and impaired immunity. Bifidobacteria-probiotics may boost your immune system, produce substances that prevent infection, prevent harmful bacteria, inhibit or destroy toxins and produce natural vitamins.

PROBIOTIC COMPLEX contains life beneficial bacteria Bifidobacteria Bifidum.

Warnings

KEEP OUT OF REACH OF CHILDREN. Pregnant or lactating women, diabetics, hypoglycemics, and people with known medical conditions and/or taking drugs should consult with a doctor prior to taking dietary supplements. These products are not intended to diagnose, treat and cure or prevent disease. Always consult with your professional health care provider before changing any medication. Store in a cool, dry place.
